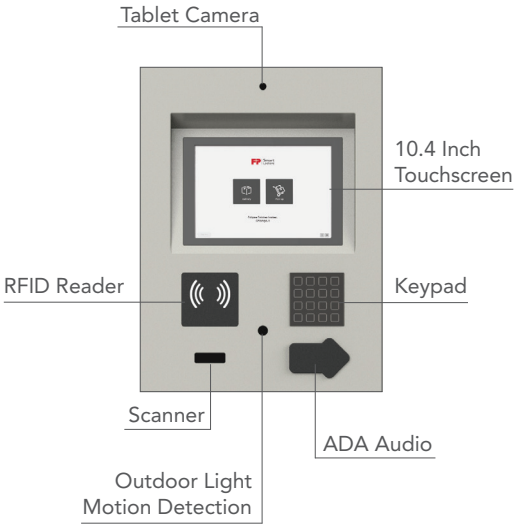
FP Smart Lockers

FP Smart Lockers

More than parcel delivery and pickup

FP Smart Lockers are the simple and modern answer to the ever-changing needs of managing parcel, mail, and asset delivery. Our systems provide a safe, secure, and convenient delivery experience with cloud-based software management and analytics. FP Smart Lockers are versatile modular systems designed for both indoor and outdoor installations and can be temperature-controlled for use as food storage. Our locker solutions are fully integrated with our TRAXsuite parcel tracking software, offering seamless integration with current parcel management systems.



Scalability

FP Smart Locker configurations and features can be tailored to the size and needs of the business, while maintaining the ability to grow in the future.

Fast Delivery

High-quality materials and superior craftsmanship make these lockers the smart choice. Most systems ship in less than 2 weeks from our California warehouse.

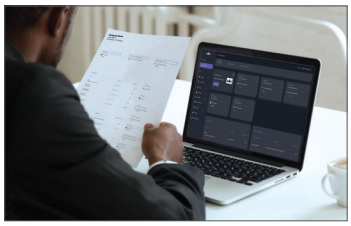
Custom Wraps

A bank of lockers offers the perfect advertising opportunity to serve your branding directly to your client base or blend a bank of lockers into the environment.

Software Capabilities

Intelligent Lock Management Solution

The FP Intelligent Lock Management Solution (ILMS) can manage a small bank of lockers or an entire fleet of lockers spread across the country. This gives property management companies control and reporting analytics over their entire network of package management solutions. The FP ILMS makes FP Smart Lockers a revenue-generating rental storage system, with the ability to offer day lockers, luggage storage, equipment rental, and more.



Application built for the future

Forward-thinking application development brings fresh new ideas to parcel lockers. Integrate ILMS with existing management systems. Modify payment options to rent by day, hour, week, or set up a subscription service. Create and assign user groups, manage and track users, and customize connected app to create the exact smart locker you need.

Create your own user experience

The customizable user app starts with selecting a template, such as delivery, storage, rental, or more. Edit the app with your company branding, choose sign-up options, and create unique push, phone, or email notifications. Assign one or more user authentication options such as Phone/Email OTP, PIN, key cards, or Apple/Google ID to provide both security and ease of use.

Accessible and truly touch-less

FP Smart Lockers allows for pickup and delivery with or without downloading the app. The recipient can click on the package receipt notification and open a locker directly from their cell phone. Lock and unlock the locker as many times as you want during a session to prevent accidental lockouts.

Add-On TRAXsuite Software

Taking package, mail, and asset tracking to a whole new level.

TRAXsuite is a cloud-based inbound parcel tracking solution that enables you to define, notify, track, manage, search, and report on all incoming parcels. Manage the ever-increasing amount of incoming packages with our scalable solutions created with user convenience in mind. Our TRAXsuite solution solves the common issues faced in large campuses and organizations by providing full traceability of parcels, proof of delivery, assigned delivery locations, a simple search process, and an audit trail with downloadable reports.

TRAXsuite Key Benefits:

- No more lost or unaccounted-for packages
- Track packages, mail, and assets all from a single platform
- Intuitive user interface.
- Scalable to meet the needs of your organization.
